ADDAC911 UTILITY PATCH BAY

October.2013

An Eurorack dedicated Utility Patch Bay

In our quest to bring more tools to the hands of Modular Synthesizer users, we've created a new solution that we believe many of you will find of much convenience.

A dedicated 19" Utility Patch Bay to free users of typical jack size issues (how do i go from here to there? where did i put my adapters?). With this solution we hope to bring a simple yet effective unification among 1/8" and 1/4" jacks in a standard 19" inch 1U rack format.

Plug all your other gear with the convenience of no adapters and in a patch bay fashion for convenience and long-term reliability. Use the white printed areas to write down what is plugged where and forget about re-routing cables over and over again.

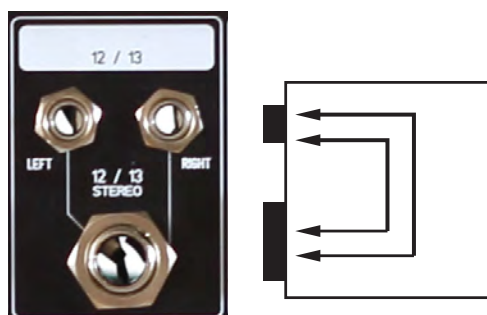

Plug your studio through it, be it other synths, guitar pedals, soundcard, mixer, you name it, use the back inputs to hide all the necessary cabling and conveniently access them from the front panel either with 1/4" or 1/8" jacks.

Split a stereo signal from a 1/4" cable into two 1/8" or combine two mono signals from two 1/8" into one 1/4" stereo cable.

Use it as a simple adapter, going from 1/4" to 1/8" or vice-versa.

Configurations

Stereo 1/4" to two Mono 1/8" Adapter or Vice-Versa

1/4" to 1/8" Adapter or Vice-Versa
